Problem 1. Current, gauge transformation

Consider the Schrödinger equation of a charged particle in the electromagnetic fields. According to EM, $\mathbf{B} = \nabla \times \mathbf{A}$, $\mathbf{E} = -\nabla\phi - \frac{1}{c}\frac{\partial}{\partial t}\mathbf{A}$.

1)

$$i\hbar\frac{\partial}{\partial t}\psi(\mathbf{r},t) = \left(-\frac{1}{2m}(\mathbf{P} - \frac{q}{c}\mathbf{A})^2 + \phi(\mathbf{r},t)\right)\psi(\mathbf{r},t), \quad (1)$$

where $\mathbf{P} = -i\hbar\nabla$. Define the probability density $\rho(\mathbf{r},t) = \psi^\dagger(\mathbf{r},t)\psi(\mathbf{r},t)$. In order to have the probability conservation, i.e., $\frac{\partial}{\partial t}\rho + \nabla \cdot \mathbf{j} = 0$, how should we define the probability current $\mathbf{j}(\mathbf{r},t)$?

2) Consider under the gauge transformation,

$$\begin{aligned} \mathbf{A}'(\mathbf{r},t) &= \mathbf{A}(\mathbf{r},t) + \nabla f(\mathbf{r},t) \\ \phi'(\mathbf{r},t) &= \phi(\mathbf{r},t) - \frac{1}{c}\frac{\partial}{\partial t}f(\mathbf{r},t), \end{aligned} \quad (2)$$

Please show that $\mathbf{B}$ and $\mathbf{E}$ are invariant.

3) Define $\psi'(\mathbf{r},t) = e^{i\varphi(\mathbf{r},t)}\psi(\mathbf{r},t)$. Please figure out how to choose $\varphi(\mathbf{r},t)$, such that $\psi'(\mathbf{r},t)$ satisfies the Schrödinger equation under $\mathbf{A}', \phi'$,

$$i\hbar\frac{\partial}{\partial t}\psi'(\mathbf{r},t) = \left(-\frac{1}{2m}(\mathbf{P} - \frac{q}{c}\mathbf{A}')^2 + \phi'(\mathbf{r},t)\right)\psi'(\mathbf{r},t). \quad (3)$$

4) Prove that $\rho(\mathbf{r},t)$ and $\mathbf{j}(\mathbf{r},t)$ you obtained in 1) are invariant under the gauge transformation defined in 2).

Problem 2. Landau gauge

In the Landau gauge for a uniform magnetic field $A_x = By$, and $A_y = 0$. Consider a special case that the impurity potential $V_{imp}(y)$ only depends on y , such that the Hamiltonian is

$$H = \frac{(P_x - \frac{q}{c}A_x)^2}{2m} + \frac{P_y^2}{2m} + V(y). \quad (4)$$

1) By plugging in $\psi(x, y) = \frac{1}{\sqrt{L_x}} e^{ik_x x} \phi_{k_x}(y)$, reduce the problem into a 1D problem in the y -direction with the following k_x -dependent Hamiltonian $H_y(k_x)$.

$$H_y(k_x) \phi_{n,k_x}(y) = E_n(k_x) \phi_{n,k_x}(y) \quad (5)$$

2) You may use the Hellman-Feynman theorem to show that $I_x(n, k_x) = \frac{q}{L_x} \frac{\partial E_n}{\partial k_x}$.

3) Prove that the Hall conductance is quantized $\sigma_{xy} = \frac{q^2}{h} \nu$, where ν is the integer filling number. Why σ_{xy} is insensitive to the concrete form of $V_{imp}(y)$.

Problem 3. Spherical coordinates

The transformation between the spherical coordinate and the Cartesian coordinates are $x = r \sin \theta \cos \varphi$, $y = r \sin \theta \sin \varphi$, $z = r \cos \theta$.

1) Please find the expression of gradient for a scalar function $f(r, \theta, \varphi)$ in terms of the spherical coordinates

$$\nabla f = \hat{e}_r \frac{\partial}{\partial r} f + \hat{e}_\theta \frac{1}{r} \frac{\partial}{\partial \theta} f + \hat{e}_\varphi \frac{1}{r \sin \theta} \frac{\partial}{\partial \varphi} f \quad (6)$$

2) Please find the expression for the divergence of a vector field $\mathbf{V} = \hat{e}_r V_r + \hat{e}_\theta V_\theta + \hat{e}_\varphi V_\varphi$ in terms of the spherical coordinates.

$$\nabla \cdot \mathbf{V} = \frac{1}{r^2} \frac{\partial}{\partial r} (r^2 V_r) + \frac{1}{r \sin \theta} \frac{\partial}{\partial \theta} (V_\theta \sin \theta) + \frac{1}{r \sin \theta} \frac{\partial V_\varphi}{\partial \varphi} \quad (7)$$

3) Please find the expression of the curl of a vector field $\mathbf{V} = \hat{e}_r V_r + \hat{e}_\theta V_\theta + \hat{e}_\varphi V_\varphi$ in terms of the spherical coordinates

$$\nabla \times \mathbf{V} = \frac{\hat{e}_r}{r \sin \theta} \left(\frac{\partial}{\partial \theta} (\sin \theta V_\varphi) - \frac{\partial V_\theta}{\partial \varphi} \right) + \frac{\hat{e}_\theta}{r} \left(\frac{1}{\sin \theta} \frac{\partial V_r}{\partial \theta} - \frac{\partial}{\partial r} (r V_\varphi) \right) + \frac{\hat{e}_\varphi}{r} \left(\frac{\partial}{\partial r} (r V_\theta) - \frac{\partial V_r}{\partial \theta} \right). \quad (8)$$

4) Please find the expression of $\nabla^2 f$ in terms of the spherical coordinates.

Problem 4. Angular momentum operators

1) Prove that in the spherical coordinates,

$$\begin{aligned} l_x &= -i\hbar(-\sin\phi\frac{\partial}{\partial\theta} - \cot\theta\cos\phi\frac{\partial}{\partial\phi}) \\ l_y &= -i\hbar(\cos\phi\frac{\partial}{\partial\theta} - \cot\theta\sin\phi\frac{\partial}{\partial\phi}) \\ l_z &= -i\hbar\frac{\partial}{\partial\phi}. \end{aligned} \quad (9)$$

2) Define $l_+ = l_x + il_y$, and $l_- = l_x - il_y$. Prove that $l^2 = l_z^2 + \frac{1}{2}(l_+l_- + l_-l_+)$, and

$$l^2 = -\hbar^2 \left(\frac{1}{\sin\theta} \frac{\partial}{\partial\theta} \sin\theta \frac{\partial}{\partial\theta} + \frac{1}{\sin^2\theta} \frac{\partial^2}{\partial\phi^2} \right) \quad (10)$$

3) Prove that $l^2 = r^2 p^2 - (\mathbf{r} \cdot \mathbf{p})^2 + i\hbar(\mathbf{r} \cdot \mathbf{p})$. Based on this relation prove that

$$-\frac{\hbar^2}{2m} \nabla^2 = -\frac{\hbar^2}{2m} \frac{1}{r} \frac{\partial^2}{\partial r^2} r + \frac{l^2}{2mr^2}. \quad (11)$$

Problem 5. Associated Legendre Polynomials $P_l^{|m|}$

Set $\cos\theta = z$, consider the following equation

$$\frac{d}{dz} \left\{ (1-z^2) \frac{d}{dz} P^{|m|}(z) \right\} + \left\{ \beta - \frac{m^2}{1-z^2} \right\} P^{|m|}(z) = 0 \quad (12)$$

To remove the singular point at $z = \pm 1$, define $P(z) = (1-z^2)^{\frac{|m|}{2}} G(z)$.

1) Prove that the differential equation changes to

$$(1-z^2)G'' - 2(|m|+1)zG' + \{\beta - |m|(|m|+1)\}G = 0. \quad (13)$$

2) Plug in $G = \sum_{n=0}^{\infty} a_n z^n$ in the above equation. Derive the recursion formula

$$a_{\nu+2} = \frac{(\nu+|m|)(\nu+|m|+1)-\beta}{(\nu+1)(\nu+2)} a_{\nu}. \quad (14)$$

3) Show that when $\beta = l(l+1)$, we arrive at polynomial solutions.

Problem 6. Generation function of Legendre Polynomials

Define the generation function of Legendre polynomials $T(t, z) = \sum_{l=0}^{\infty} P_l(z)t^l = \frac{1}{\sqrt{1-2tz+t^2}}$.

1) Calculate $\frac{\partial T}{\partial t}$, and then prove that $(1-2zt+t^2) \sum_l l P_l t^{l-1} = (z-t) \sum_l P_l t^l$. Prove that

$$(l+1)P_{l+1}(z) - (2l+1)zP_l(z) + lP_{l-1}(z) = 0. \quad (15)$$

2) Calculate $\frac{\partial T}{\partial z}$. Prove that

$$\frac{d}{dz}P_{l+1}(z) - 2z\frac{d}{dz}P_l(z) + \frac{d}{dz}P_{l-1}(z) = P_l(z). \quad (16)$$

3) Prove that

$$\begin{aligned} z\frac{d}{dz}P_l(z) - \frac{d}{dz}P_{l-1}(z) &= lP_l(z). \\ \frac{d}{dz}P_{l+1}(z) - z\frac{d}{dz}P_l(z) &= (l+1)P_l(z) \end{aligned} \quad (17)$$

4) Prove that

$$\frac{d}{dz} \left\{ (1-z^2) \frac{d}{dz} P_l(z) \right\} + l(l+1)P_l(z) = 0. \quad (18)$$

5) Prove that if $l \neq l'$,

$$\int_{-1}^{+1} dz P_{l'}(z) P_l(z) = 0. \quad (19)$$

(Hint: Multiply $P_{l'}(z)$ to the equation in 1).)

6) Based on the results in 1), prove that

$$\int_{-1}^{+1} dz (P_l(z))^2 = \frac{2l-1}{2l+1} \int_{-1}^{+1} dz (P_{l-1}(z))^2 \quad (20)$$

And finally

$$\int_{-1}^{+1} dz (P_l(z))^2 = \frac{2}{2l+1}. \quad (21)$$

Problem 7. Associated Legendre Polynomials

Define the Associated Legendre polynomial

$$P_l^{|m|}(z) = (1 - z^2)^{|m|/2} \frac{d^{|m|}}{dz^{|m|}} P_l(z). \quad (22)$$

1) Prove that $P_l^{|m|}(z)$ satisfies

$$\frac{d}{dz} \left\{ (1 - z^2) \frac{d}{dz} P_l^{|m|}(z) \right\} + \left\{ l(l+1) - \frac{m^2}{1-z^2} \right\} P_l^{|m|}(z) = 0. \quad (23)$$

2) Prove that if $l \neq l'$,

$$\int_{-1}^{+1} dz P_{l'}^{|m|}(z) P_l^{|m|}(z) = 0. \quad (24)$$

(Hint: Multiply $P_{l'}^{|m|}(z)$ to the equation in 1).)

3) Prove that

$$\int_{-1}^{+1} dz (P_l^{|m|+1}(z))^2 = (l - |m|)(l + |m| + 1) \int_{-1}^{+1} dz (P_{l-1}^{|m|}(z))^2, \quad (25)$$

such that

$$\int_{-1}^{+1} dz (P_l^{|m|}(z))^2 = \frac{2}{2l+1} \frac{(l+|m|)!}{(l-|m|)!}. \quad (26)$$

(Hint: You can use the definition of $P_l^{|m|}$ and also the equation in 1)

4) Prove that

$$z P_l^{|m|}(z) = \frac{l+|m|}{2l+1} P_{l-1}^{|m|}(z) + \frac{l-|m|+1}{2l+1} P_{l+1}^{|m|}(z) \quad (27)$$

Problem 8. Laguerre polynomials

1) Consider the differential equation

$$\xi u'' + (2(l+1) - \xi) u' + (\lambda - l - 1)u = 0 \quad (28)$$

Expand the expression of u as

$$u(\xi) = \sum_{\nu=0}^{+\infty} a_{\nu} \xi^{\nu}. \quad (29)$$

Plug it into the above equation and find the recursion relation between $a_{\nu+1}$ and a_{ν} . Set $a_0 = 1$, please find the expression of $u(\xi)$.

2) Please show that in the general case $u(\xi) \sim e^{\xi}$ as $\xi \rightarrow +\infty$. Please find that under what condition u can be truncated as a polynomial.

3) Define the generation function

$$U(\xi, u) = \sum_{m=0}^{+\infty} \frac{L_m(\xi)}{m!} u^m = \frac{1}{1-u} e^{-\frac{\xi u}{1-u}}. \quad (30)$$

Calculate $\frac{\partial U}{\partial u}$ based on the above equation, and prove that

$$L_{m+1}(\xi) + (\xi - 1 - 2m)L_m(\xi) + \xi^2 L_{m-1}(\xi) = 0. \quad (31)$$

Calculate $\frac{\partial U}{\partial \xi}$ based on the above equation, and prove that

$$L'_m(\xi) - mL'_{m-1}(\xi) + mL_{m-1}(\xi) = 0. \quad (32)$$

4) Prove that

$$\xi L''_m(\xi) + (1 - \xi)L'_m(\xi) + mL_m(\xi) = 0. \quad (33)$$

5) Define the associated Laguerre polynomials as $L_m^s(\xi) = \frac{d^s}{d\xi^s} L_m(\xi)$. Prove that

$$\xi L_m^{s, ''}(\xi) + (s + 1 - \xi)L_m^{s, '}'(\xi) + (m - s)L_m^s(\xi) = 0. \quad (34)$$
